Air Brake System for Side Loader

Baumann-Side Loader GX 70 is given the extra equipment Duo-Matic-quick coupler and 24 V socket

Calle, August 2017 Schleifer GmbH from Aßlar in Germany has had Tietjen GmbH develop a pneumatic braking unit for the Baumann-side loader GX70. The loader is also equipped with Duo-Matic quick couplers and a 24 V socket plus voltage doubler. The standard 12 V on-board power supply must be doubled to the 24 V usually found on lorries since the side loader can also pull lorry trailers. The Duo-Matic quick couplers from Wabco join the pneumatic braking system on the side loader with the braking system on the trailer. They allow quicker, safer coupling compared with standard couplings. To make manoeuvring with trailers easier, the Baumann side loader has Duo-Matic quick couplers at both front and rear.

Duo-Matic quick couplers at front and rear allow for quick and safe coupling.
